Customer Reviews

This book and all of the 4 and 5 star reviews must be a big joke; I can appreciate that enough to get over some of my anger of paying money for this. Joke's on me. I read the first sentence, and I had a feeling I wouldn't be able to finish it. I forged on through the first page, though, at which point I knew it was nearly useless. I still wanted to finish it, so I could review it with authority. I made it 1.5 pages. 1. Horribly written. Bad grammar, misspellings and typos, sentences that make you want to grind your teeth, vague yet wordy. 2. Misinformation. In a section talking about plants: "A flower will produce either the egg or the sperm depending on the sex of the plant. Some plants will produce both, depending on their species. Yet in order to achieve conception, the plant needs to rely on other species to provide the connection between the egg and sperm." Some flowers self-pollinate; peas, for example. The stamen and pistil are completely enclosed in the keel. I don't think I need to mention the poor usage of "egg", "sperm", "conception", or even "species". 3. Slanted, zero citation. The last paragraph is as follows, "No, in fact governments and individuals are producing energy in a more sustainable way. Most importantly, these official channels are changing their viewpoint about how the earth should be treated. It does not mean that the extinctions will stop overnight. But by creating the change we wish to see, we as individuals can have a greater impact on how the world and its organisms are cared for." 4. Not a self-study guide for biology! The chapters can be seen in the preview. Don't let the first two fool you.
